

UK DATA CENTRE

The data centre is a modern facility that enjoys high levels of security, power, cooling, connectivity and technical support to put your mind at ease.

EnablesIT is an IT services partner with its roots firmly set in the data centre. We provide our clients with access to a range of data centre space in the UK and can offer capacity across the globe with an appropriate choice of network connectivity. Drawing from our practical experience gained over many years, we offer clients the benefit of advice and guidance with our data centre strategy consultancy.

We are able to design, architect and deploy your own data centre either in your own environment or in our colocation facilities for you to manage and operate giving you the level of control you need. We provide managed services which include the monitoring and management of your infrastructure, applications and data, irrespective of data centre location, from our 24/7 Service Desk. Backup and disaster recovery is an integral component to any of our offerings giving you peace of mind knowing your data will be available when required.

We are currently working to attain CSA Star Cloud Status with standards that include HIPAA (health Insurance Portability and Accountability Act), SOC@ (Service Organisation Controls) and ISO27001:2013 (international Standards Organisation).

KEY FEATURES OF OUR DATA CENTRE INCLUDE:

- Secure site access and control
- On-Site Carriers: Multiple carrier choice from the UK, European and global carriers
- Site monitoring with technical support: 24 x 7 x 365
- Security: Proximity Card Reader, Surveillance, and Access Control, Video
- General Fuel Reserve: 24 hours at full load
- Fire Protection: Argonite
- Water Cooling System
- Raised Flooring Throughout
- Hybrid models bespoke to your need's
- Pay as you go options

BENEFITS:

- Risk mitigation - Housing your IT equipment in a secure off-site environment makes your business less vulnerable to physical loss or damage of critical business systems.
- System availability - High quality datacentre environment, with redundant power and cooling systems, and engineers on site 24 hours a day, add a new level of reliability to system availability.
- Cost of office space - businesses are finding that locating their IT infrastructure within their City offices incurs ongoing costs that are hard to justify.
- The demands of new technology - New server and storage technology is demanding more power and air-conditioning to be able to operate, and the costs of refurbishing and upgrading an IT environment located in office space can be huge.
- Carrier connectivity - excellent local carrier connectivity is enhanced by a fibre link between datacentres; this ensures access to an even more extensive range of cost-effective carrier connectivity.
