

BACKUP AS A SERVICE

Your organisation's information is its most valuable asset. Imagine the consequences of losing even a fraction of the data you hold on customers, suppliers, staff or transactions.

An effective daily backup routine is essential. Organisations owe a duty of care to the stakeholders whose data they hold. But, beyond that, the simple fact is that too many businesses just never recover from a major data loss.

EnablesIT offers a cloud-based backup service that is tailored to your specific need for robust, secure backup and – importantly – quick and effective restore, all out-of-the-box. Our experienced backup consultants will work with you to understand your organisation and its data before designing a service to meet your needs. We can back up your data wherever it is held – in the data centre, desktop or laptop – and secure it, in encrypted form, within our Tier III UK or US data centres. We can also design and deploy a private backup service to secure your data within your own offices or data centre.

KEY FEATURES OF BACKUP AS A SERVICE INCLUDE:

- Implemented to your requirements for secure backup and effective restore
- Private or public cloud option
- Hosted in our resilient and secure data centre
- Monitored and proactively managed 24/7
- Available as a standalone service or as an integral part of our Managed Services offerings
- Documented and tested with regular restores

BENEFITS:

- Secure your valuable data against accident or attack
- Protect your business with monitored data backup and reliable restore
- Ensure compliance with duty of care and data protection requirements
- Have confidence that data can be recovered quickly, whenever required
- Enjoy peace of mind, knowing you can restore entire servers or a single file, anywhere in the world
- Replace up-front capital expenditure with a predictable operating cost model
