

NETWORK INFRASTRUCTURE

A resilient, flexible network is the backbone of any organisation. It delivers your applications and data to staff and customers wherever they are. EnablesIT provides a full range of secure and resilient, high capacity network options.

Data drives today's organisation, but that requires the right infrastructure: the routers and switches, load balancers and firewalls, right down to the cabling and wireless points that deliver data securely to your device, wherever you are.

Our roots lie in network deployment. For over 25 years, we have developed our expertise designing and installing network infrastructure for customers, often in regulated and secure environments. We have architected and provided core networks that determine the availability of data centres and we have installed high performance wireless networks throughout large office and campus environments.

Balancing security compliance with the total flexibility required by Bring Your Own Device services isn't easy. Our highly experienced architects and engineers understand how to design and deliver the security, reliability, flexibility and performance that today's organisations demand.

KEY FEATURES OF NETWORK INFRASTRUCTURE INCLUDE:

- Over 25 years' experience in deploying secure network infrastructure
- End-to-end capability – from architecture to deployment
- Complete portfolio of services: cabling and wireless, LAN and WAN, monitoring and management
- Highly experienced and qualified engineers and consultants
- Experienced in the needs of all data centre and office environments

BENEFITS:

- Provide secure, high-capacity, high-speed data access wherever needed
- Ensure the integrity and reliability of your communications and data network
- Benefit from expertise across the entire network infrastructure
- Obtain greater value with vendor-independent advice
- Provide secure, flexible work styles with mobility and Bring Your Own Device
- Receive independent guidance on secure network provision
- Balance greater integrity of data with greater freedom of access
