

PRIVATE CLOUD

Private cloud offers the power, efficiency and features of a public cloud with the security, control and performance of a dedicated environment. It gives you all the benefits of cloud-scale compute power and storage, tailored to your specific requirements and dedicated for your use. It can be installed either on your premises or in our Tier III UK or US data centres.

A private cloud gives the ability to provide multiple server images and storage volumes to your organisation from a central resource that has been built to a proven blueprint. Drawing upon our operational experience of public and private cloud platforms, we tailor the final design to meet your needs.

Our private cloud solutions can be installed in our resilient and secure Tier III UK and US data centres or within your own environment. In either case, we offer a fully managed service providing round the clock system monitoring.
